

Professional Web cameras and Time lapse photography

- Built in video server.
- High quality images
- Choice of resolutions.
 - 0.3 MP (MegaPixel)
 - 1 MP - 720 HDTV
 - 3 MP - 1080 HDTV
 - 5 MP - 1080 HDTV

Snowgrass Solutions provides IP camera solutions for promotion and monitoring purposes.

Snowgrass Solutions provide high quality cameras for roles as professional “web” cameras.

The camera’s advanced operating system and internal video server provide versatile imaging options, from remote live-video access through to simple image uploads to an external web server for display on a web site.

A range of camera resolutions from 0.3 to 5 mega pixel is available.

The higher resolution cameras provide live video access in wide screen 16:9 HDTV format.

Snowgrass Solutions can “value add” a regular image output from one of their cameras by providing a time lapse movie service.

A series of regularly captured images can be converted into a movie to show changes to a project in the view of the camera, such as a construction site.

The resulting movie is available at the resolution of the original camera, but can be reduced in size for display on a web site

Developments in mobile technology now allows Snowgrass Solutions to connect their cameras to the Internet via a recently developed high speed 3G router - no longer restricting the cameras to locations with fixed Internet connections.

The addition of a solar charged battery provides a truly remote camera solution.
